

## XP1000 Stock Aluminum Roof (P141090)

### Installation Instructions

#### INSTALLATION INSTRUCTIONS:

1. Place the aluminum Pro Armor roof in place and make sure there is nothing on the cage to interfere with the mounting of the roof. The roof should look like below when putting in place and the cage should look the same also.
2. Use the four(4) supplied M6 button head bolts in the four locations with red arrows showing below. Run the bolts facing from top to the bottom of the UTV. Before installing the nuts, use the four(4) supplied rubber washers and install them in between the roof and the cage. Note: Seems easier to do one at a time and just lift the roof and pull the bolt out, just enough to slide on the washer and run the bolt back through the center of it.
3. There a eight(8) rubber pads you can place strategically around the roof , keeping it from making any rattle noise where it may be close to the cage or other metal.
4. You can now put all the nuts on and fasten securely.
5. Last check is to use your hand and tap around the roof making sure most rattles are out. If there are still rattles, make sure the top is tight or add a rubber strip to keep it quiet.

ITEM NO.	PART NUMBER	DESCRIPTION	QTY.
1	HDW00009	1" x 2" VIBRATION PAD	8
2	P141090-07	RUBBER WASHER	4
3	HDWB0251	BOLT, M6 x 16MM, BUTTON HEAD FLANGE, BLACK ZINC	4
4	HDWN0008	NUT, M6 X 1.0 NYLOC FLANGED HEX	4
